

Root Canal Order of Procedure

Seat patient, take BP, go over HH, Double check procedure and tooth to be worked on.

Place topical in patients mouth, go get DDS

Remove topical, DDS gives injection.

Wait for patient to get numb (10 minutes)

Place bite block and cotton roll.

DDS drills decay or filling.

DDS uses file to remove nerve, takes several x-rays while doing this and measures in millimeters.

Irrigate with Sodium Hypochlorite

Using Paper Points dries the canals

Gutta Percha is used to fill canals

Filling material is placed in tooth, light cure

Adjustment made to filling

Patient is released and room is cleaned
